

Problem: feeding poultry (approximately 50 chickens) (egg sell)

Summary: producing your own poultry food for approximately 50 chickens is often not feasible. If buying a complete feed is too expensive, you can buy a poultry feed concentrate (5% or 10%). Concentrate contains all essential vitamins, minerals and some amino acids. This concentrate can be mixed with one cereal (maize, wheat or sorghum) and one protein source (soyabean meal, sunflower cakes). Use of tapioca (with a protein source) can also be considered.

Trefwoorden: Poultry, feed, selfmade
